

Chances are you didn't know that Bright House Networks is mid-Florida's fiber leader, and that we deliver a wide range of world-class broadband services to companies large and small. We put our name on this vital part of our business - so you know that you are being served by an organization with deep roots in the community, who will be available and accountable to you. Now you have a partner who is deeply committed to innovation and leadership that will help you drive your business' success for years to come.

The decision that you make today is a decision that can affect the level of success you experience in your business. With Bright House Networks Business Solutions as your network service provider you gain the benefit of working with a partner you can trust to be here with you for years to come.

Internet Services

MEET THE ONLINE DEMANDS OF YOUR BUSINESS. NOW.

As the fiber leader, Bright House Networks has built the largest fiber optic network supporting over 2.4 million video and data customers in mid-Florida. Our infrastructure is designed for the delivery of high speed digital data directly to our customers' premises. We have built our network from the ground up to provide the highest level of quality and the most reliable infrastructure available. You can be confident that your critical data rides on proven, top-performing platforms built and maintained by the world's leading network hardware and infrastructure companies. Our highly reliable core network consists of thousands of miles of fiber optic cable and a redundant path architecture, which exceeds the standards of many ISPs in the market. The Bright House Networks backbone incorporates multiple 10Gbps Ethernet connections to accommodate even the most heavy bandwidth requirements.

CONNECT

Get up and running with an always-on Internet connection that is many times faster and more reliable than dial-up and DSL - the kind of business-caliber access you deserve. With the Business Combo, you also get Digital Cable that is tailored to your specific needs.

- Connect to customers with a high speed broadband connection.
- Connect to suppliers with Bright House Networks business email services, or we can customize a domain name for your business and email needs.
- Connect to partners across our Gigabit-speed fiber backbone with performance that accelerates the transfer of large items.

MANAGE

With Bright House Network Business Solutions you gain the power to create flexible and sophisticated IT solutions for your business:

- Manage data and resources with Automatic Remote Data Backup to protect your business from sudden data loss due to system failure, viruses, fire and natural disasters.
- Manage access and ensure data security for personnel at remote locations with Virtual Private Network (VPN) solutions.
- Manage web resources such as routers, web, email and game servers with Static IP solutions.
- Manage expenses by combining work-from-home solutions on a convenient single bill.

GROW

Launch a website that projects and promotes your business. Make it a simple, information-based site, or a deep e-commerce site that enables your customers to purchase your products through secure online transactions. You can even drive customers to your site with search engine marketing and pay-per-click advertising.

USER LEVEL SECURITY

Business Solutions customers can now enjoy anti-virus, anti-spam and spyware protection, along with a personal firewall for your Windows-based computer systems - at no additional charge.

User Security Suite is a comprehensive, robust software supported by Computer Associates and developed specifically for Bright House Networks. The User Security Suite adds an important security layer for business users who depend on the benefits of an always-on connection and want to protect their PC's from viruses. It also diminishes the ever-increasing annoyance of spam emails.

AUTOMATIC REMOTE DATA BACKUP

Bright House Networks Automatic Remote Data Backup protects your files from viruses, system crashes, and other disasters. Once installed and configured, it saves and stores all designated files on a secure, remote server; then automatically backs up any files on a regular basis. Retrieval is as easy as entering a URL and secure password from any Internet-enabled computer - anytime, anywhere.
